

SALLY THE SCIENTIST:

SCUBA Sally

SCUBA Sally conducts her research underwater in the kelp forest, such as those at Point Loma and La Jolla. Kelp forests are some of the most productive ecosystems in the world. Giant kelp is the world's largest seaweed and grows from the seafloor to the surface providing food and shelter for many invertebrates and fishes. Sally studies the relationships between seaweed, animals, and their environment. When Sally goes to the kelp forest she can observe patterns or conduct experiments to understand how seaweed and animals interact with one another.

Submit a picture of you and Sally doing science together!
#SallytheScientist

See what kind of science adventures Sally is participating in at CMIL and submit your own photo of you and Sally.
